

How to measure distances and bearings?

A measure tool is available allowing to compute distances and bearings between any location.

- Click on the map center icon **1** and select **"Create a landmark..."** **2**;
- Under the **"Tools"** category, click on **"Measure"** **3**.

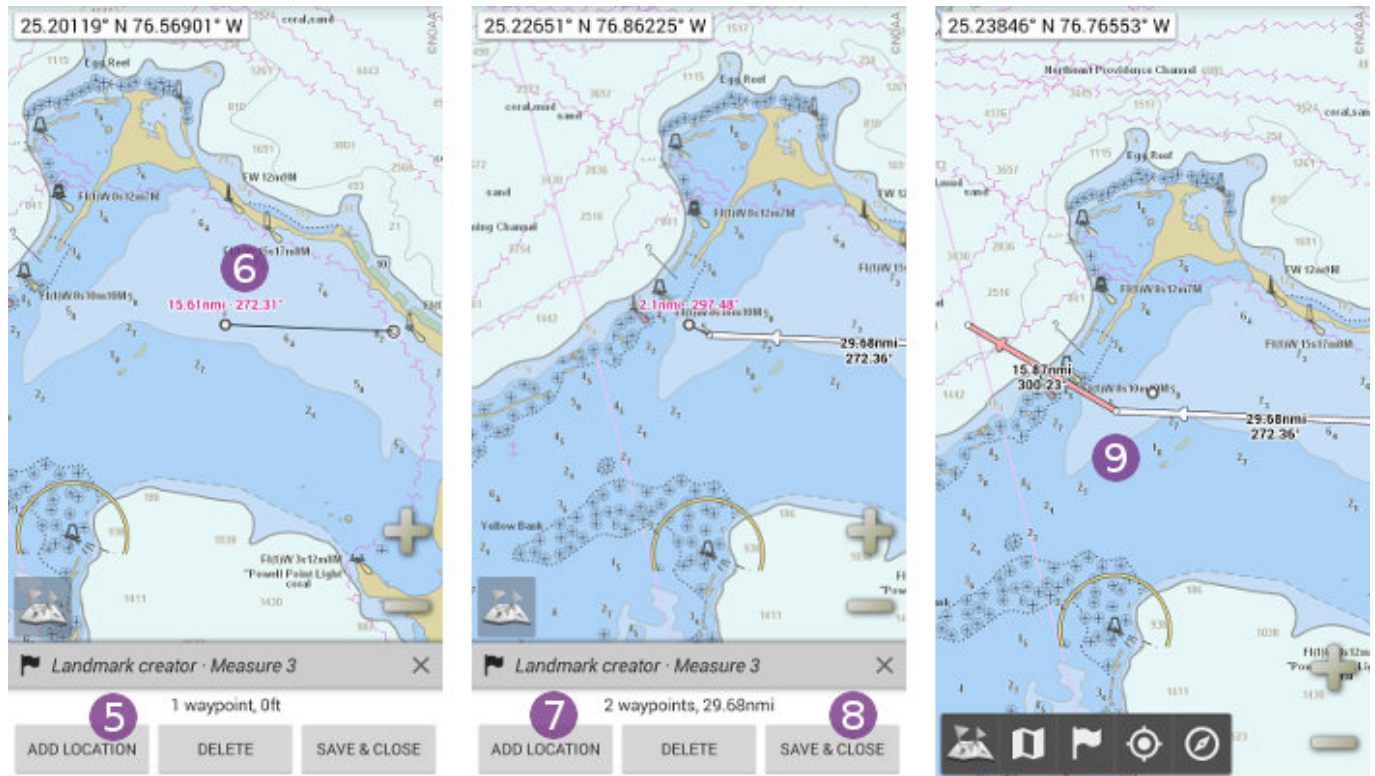

The **"Landmark creator"** **4** side-view is displayed.

- Click on **"Add location"** **5** to define the first location, and move the map over the second location. The distance and bearing to the screen center is previewed **6**;
- Click on **"Add location"** **7** again to define the second location. You can repeat the process for any number of locations;
- When you've done, click on **"Save & Close"** **8** to close the landmark creator.

Your measures remain displayed on the map **9** until you delete them.

i Lines between measured locations are colored depending on the bearing: red when going north, blue when going south.
