

Landmarks

The Landmarks feature allows you to save, retrieve and display on the map various items like locations and paths.

The Landmarks Menu

The Landmarks Menu gives you an easy access to all landmarks related features.

Click on the “**Landmarks**” menu **1** to display the sub-menu. You'll then find the following items:

- “**Explore landmarks**” **2** opens the Landmarks Explorer that allows you to manage your saved landmarks;
- “**Create a landmark**” **3** allows you to create new landmarks;
- “**Displayed landmarks**” **4** shows the displayed landmarks list that allows you to manage displayed landmarks (available only if landmarks are displayed);
- “**Search a location**” **5** allows you to search for a place (by name or coordinates).

The following settings are also available in the Landmarks menu:

- “**Landmarks labels**” **6** controls whether or not to display the labels of landmarks displayed on the map;
- “**Target information**” **7** controls whether or not to display the target information box (if

any landmark is targeted).

Waypoints

A waypoint is a particular location marked on the map and the most common type of landmark.

By default, they are only represented by a small purple circle, but they can be named and have different colors or icons.

 From the Landmarks Menu, you can specify if the names of waypoints must be displayed on the map. You can also configure the display size from the application settings.

Sets of waypoints

Waypoints can be grouped into sets allowing an easier management. Sets are very useful when handling many waypoints of a common theme.

Routes

Routes are ordered lists of waypoints. All points of routes can be edited like any waypoint. Routes are mainly useful when preparing a journey.

Routes are displayed with a line joining all the waypoints.

i From the Landmarks Menu, you can specify if the names of waypoints must be displayed on the map. You can also configure the display line thickness from the application settings.

Tracks

Tracks are lists of locations representing a path. A track can be composed of multiple sub-lists, called segments. Additionally, a track can contains waypoints giving informations about the surrounding places.

Tracks are displayed as simple lines. If the locations contain time information, the time of the bounds are also displayed.

i You can configure the display line thickness from the application settings.

Import/Export

The application allows you to import placemarks (waypoints, routes, tracks, areas) from various file formats and display them on the map.

Supported file formats and types of placemarks	Import	Export
GPX (*.gpx) Waypoints, routes, tracks	✓ Yes, see here	✓ Yes, see here

Supported file formats and types of placemarks	Import	Export
KML/KMZ (*.kml, *.kmz) Waypoints, routes, tracks, areas	✓ Yes ¹ , see here	✓ Yes, see here
CSV/TSV (*.csv, *.tsv) Waypoints, routes, tracks, areas	✓ Yes, see here	✓ Yes, see here
OziExplorer PLT (*.plt) Tracks	✓ Yes, see here	✗ No
OziExplorer WPT (*.wpt) Waypoints	✓ Yes, see here	✗ No
Geocaching LOC (*.loc) Waypoints	✓ Yes, see here	✗ No
AutoCAD DXF (*.dxf) Waypoints, routes, tracks, areas	✗ No	✓ Yes, see here

1. Includes few icons and style elements. Ground overlays are not supported.
