

# How to export the displayed map view as an image?

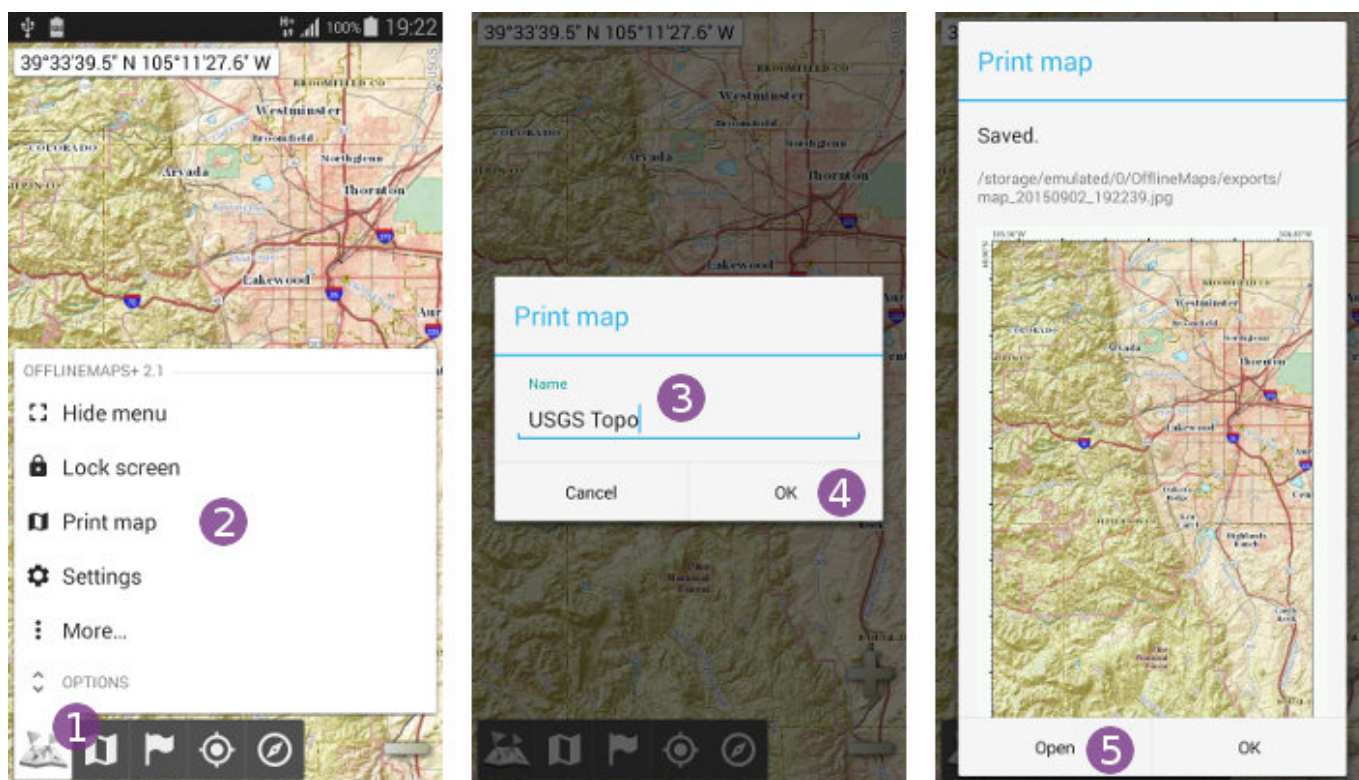

The application allows you to export any displayed map view as a JPEG image. When the map is exported, all control buttons are hidden.

Before exporting a map view, choose an orientation (portrait, landscape or any other custom rotation), adjust the view bounds and display any landmarks.

Then, to export the displayed map view:

- Click on the **“Main menu”** <sup>1</sup> icon and select **“Print map”** <sup>2</sup>;
- Optionally, type a name <sup>3</sup> for the exported image and click on **“Ok”** <sup>4</sup>;
- Once saved, the exported image will be displayed. Click on **“Open”** <sup>5</sup> to display it in your favorite image viewer.

<sup>i</sup> For legal reasons, some maps (like Google Maps) cannot be exported.

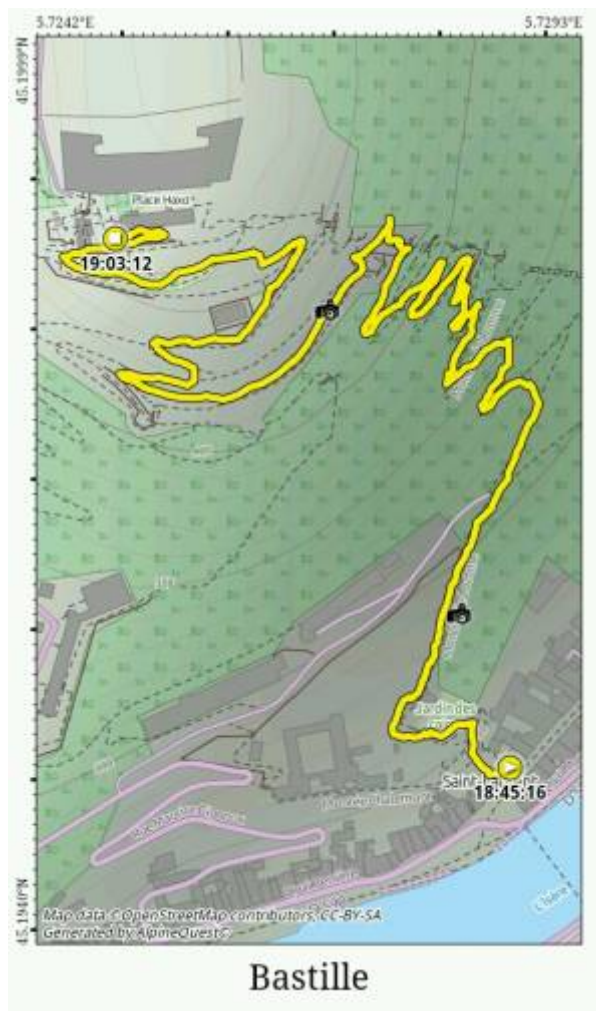

## Exported maps examples

The following maps have been exported by the application and unmodified (click to enlarge them).

Here is a small scale of the Contiguous United States:

Here is a large scale of a recorded track:

And here are the English Heritage sites:
